DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Allan Brett on 1/27/2011.

The application has been amended as follows: Regarding claims 5-6 and 12-17, claims 5-6 and 12-17 are cancelled.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: Regarding claims 1 and 22, the prior art of record, Yarkosky teaches a partner relay system (Fig. 1) comprising a first relay 2 (Fig. 1) adapted to receive a first signal in the downlink direction 6 (Fig. 1) on a first wireless transmission resource 102 (Fig. 3), perform a first signal translation on the first signal to a second transmission resource 104 (Fig. 3), and re-transmit the first signal in the downlink direction 10 (Fig. 1) on the second wireless transmission resource 106 (Fig. 3); a second relay 12 (Fig. 1) in a spaced arrangement from the first relay adapted to receive the first signal in the downlink direction 10 (Fig. 1) on the second wireless transmission resource from the first relay 108 (Fig. 3), perform a second signal translation 110 (Fig. 3) to re-translate the first signal to the first wireless

transmission resource, and re-transmit the first signal 112 (Fig. 3) in the downlink direction 14 (Fig. 1).

The prior art fails to teach a partner relay system comprising a first relay adapted to receive a first signal in the downlink direction on a first wireless transmission resource, perform a first signal translation on the first signal to a second transmission resource, and re-transmit the first signal in the downlink direction on the second wireless transmission resource; a second relay in a spaced arrangement from the first relay adapted to receive the first signal in the downlink direction on the second wireless transmission resource from the first relay, perform a second signal translation to re-translate the first signal to the first wireless transmission resource, and re-transmit the first signal in the downlink direction; wherein the first wireless transmission resource is a transmission resource allocated for forward link transmissions from the first transceiver, and the second wireless transmission resource is a transmission resource allocated for reverse link transmissions to the first transceiver.

Further, on page 7 line 7-page 8 line 18 of the BPAI decision filed on 11/1/2010 state the reason for allowance.

The prior art of record fails to teach the claimed subject matter as claimed and substantially connected in claims 1-4, 7, 9-11, and 18-21 and 22-23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nomura discloses a transmission system and coding communication system. Baker discloses a system for identifying and monitoring repeater traffic in a code division multiple access system. Weissman discloses a repeater with diversity transmission. Atkinson discloses a wireless digital communication system having hierarchical wireless repeaters with autonomous hand-off. Bunton discloses a communications system.
